American Radiosurgery Completes Successful Exhibition at AANS Annual Meeting in Denver

National and international interest in American Radiosurgery's RGS Vertex360 continues to grow

Denver, CO, April 14, 2011 - American Radiosurgery, Inc. announced today that the company has successfully completed its exhibition at the 79th annual scientific meeting of the American Association of Neurological Surgeons held April 9-13, 2011 in Denver.

“Surgeons from both the United States and international locations continue to view the RGS Vertex360 as a viable alternative to the traditional and expensive Gamma Knife® for use in the noninvasive treatment of brain tumors,” said Kelly O’Connor, Vice President of Marketing & Sales for American Radiosurgery.

Mrs. O’Connor added, “We continue to develop partnerships with neurosurgeons who are seeking to upgrade their older Gamma Knife systems, or who wish to form groups to purchase new radiosurgery devices. Exposure at industry meetings such as the AANS furthers our corporate goals.”

American Radiosurgery, Inc., is based in San Diego, California and is a neurosurgical/radiosurgical device company providing advanced technology for the non-invasive treatment of brain tumors and other brain disease entities.
